Yantorno, C., 456

SUBJECT INDEX

Antibodies, production of, in cryosurgery, 456
Asphyxia, 400

Bacteriophages, long term storage, 68
Biopolymer-solvent interactions, 27

Cells
  ascites, 59
  epidermal, 261
  human normal and leukemic, 445
  kidney, 81, 85, 269
Cryobiology, Society, Fourth Annual Meeting program and abstracts, 355
Cryochemistry
  animal tissue, 224
  fish muscle, 297
  freeze-dried foods, 288
  plant tissue, 243
Cryopreservation (*see also* Preservation, low temperature)
  conference on, 95
  coordination of research, 97
  human normal and leukemic cells, 445
  skin, 97, 109, 131, 178, 192, 272
Cryoprotective agents
  biochemistry, 12
  comparison, 272
  structure and function, 2
  symposium on, 1
Cryosurgery, experimental system for production of antibodies, 456

Dimethyl sulfoxide
  effect on lipoproteins, 328
  effect on oxygen consumption, 265
  preservation of human normal and leukemic cells, 445
  toxicity of high concentrations, 464
Drug responses in viably frozen mammalian hearts, 335

Ehrlich ascites cells, volume changes after freezing, 59
Escherichia coli, 40
Ethanol, 400

Flavor changes in frozen foods, 230
Food, low temperature preservation, 197, 214, 224, 230, 236
Freeze-drying
  foods, 288
  frost-sensitive organisms, 283
  histochemical stability of tissue sections, 414
  muscle fibers, 341
  Spirillum atlanticum, 419
  viruses, 423
Freeze-thaw-induced latent injury, 407
Freeze-tolerant solid medium for air-borne microorganisms, 88
Freezing
  animal tissue, 224
  ascites cells, 59
  bacteriophages, 68
  biochemistry, 12
  Escherichia coli, 40
  fish muscle, 297
  food, 197, 214, 230, 236, 288
  kidney, 76, 81, 85, 269
  mammalian hearts, 335
  marrow, 47, 59
  muscle fibers, 341
  Pasteurella multocida, 53
  Philodina, 392
  plant tissue, 243
  rat heart, 464
  skin, 97, 109, 131, 178, 192, 272
  viruses, 423, 432
Freezing rates
  transplantation efficiency of marrow, 47
  uncontrolled and controlled, 269

Glycerolization of kidney, 76, 306

Hearts, drug responses in viably frozen mammalian, 335
Hypothermia, 400

Interactions
  among ethanol, hypothermia, and asphyxia, 400
  biopolymer-solvent, 27
  protein, 243
  water-solute, 32

Kidney
  freezing and processing of human embryonic cells, 85
  freezing and storing cells, 81
  glycerolization, 76, 306
  uncontrolled and controlled rate freezing, 269

Lipoproteins, 328

Marrow
  transplantation efficiency and cooling rate, 47
  volume changes after freezing, 59

Organs, whole, apparatus for pulsating perfusion of, 252

Oxygen consumption, effect of dimethyl sulfoxide, 265

Pasteurella multocida, 53
Perfusion of whole organs, 252
pH changes in buffers and foods during freezing and storage, 236
Philodina, 392
Preservation, low temperature (*see also* Cryopreservation)
  food, 197, 214, 224, 230, 236
  lipoproteins, 328
  marrow and ascites cells, 59

Rehydration, effect of temperature and medium on viability, 419

Skin, cryopreservation, 97, 109, 131, 178, 192, 272
Spirillum atlanticum, 419
Storage at liquid nitrogen temperatures, 68
Survival
  Escherichia coli frozen in cell extracts, 40
  Pasteurella multocida, 53
  rotifer Philodina after freezing and thawing, 392

Thermal conductivity, 318
Thermal requirements *in vitro* of epidermal cells, 261
Tissue bank methods of skin preservation 178
Tissues
  histochemical stability of freeze-desiccated, 414
  thermal conductivity, 318
Transplantation efficiency of marrow after cooling, 47

Vacuum sublimation of viruses, 432
Viruses, freezing and freeze-drying, 423, 432
Volume changes after freezing, 59

Water and aqueous solutions, structure of, 19
Water-solute interactions, 32
Water sorption isotherms from freeze-dried muscle fibers, 341
